

I'm not robot!

Loading... by Ken Saunders Here are a few quick and easy ways to install Firefox add-ons manually. Some are quicker than others, you'll just have to pick the one that you like the most. First Things First - Install methods - Install a Firefox Theme Manually First Things First If you have already saved an extension to your desktop (or other location), you can skip this. Download the extension that you want to your computer. For security reasons, it is highly recommended that you only save/install add-ons from the official Firefox Add-ons site, from an official Mozilla site, from a Mozilla repository on github, or from a trusted Mozilla employee or volunteer. If a download option isn't available, right click on the extension's install link and select "Save Link As...". Be sure not to change the file extension. A Firefox extension will be an .XPI file. Example: web_developer_tools_toolbar_button-0.9.5-fx.xpi Once you have downloaded the extension, there are several ways that you can install it. Tip: To find the location where add-ons are installed by default, press Alt + h > t (Help > Troubleshooting Information) > Profile Folder > Show Folder > extensions. Manual Install Methods Method: Since Firefox 4, there has been an option to manually, and easily install saved add-ons. Open the Add-ons Manger > (Alt + t > a) click on the gear icon (Tools for all add-ons) > Install Add-on From File... > browse to the add-on > double click the add-on (or select Open) > Install Now Despite this, the following tips may still be better and/or quicker options for you. Method: With Firefox open, hit Ctrl+ o (or Cmd+ o) > browse to the extension > double click the extension (or select Open) > Install Now. Method: Press Alt + f > o > browse to the extension > double click the extension (or select Open) > Install Now. Method: Drag the extension to the instance of Firefox on the taskbar > wait for Firefox to appear > drop onto the browser window > Install Now. Method: Drag the extension to the Firefox desktop (or other) program shortcut. If Firefox is running, you'll see the Software Installation window appear > Install Now. If Firefox is not running, it will start up and the Software Installation window appear > Install Now. If you have a Firefox desktop shortcut with -no-remote -p appended to it (allows for running multiple instances of Mozilla apps), you can install the extension into whatever profile that you'd like if Firefox is not currently running. Tip: If you do run multiple, simultaneous instances of Firefox (e.g., Release, Aurora, Nightly, etc), you can drag and drop an XPI link, or the "Add to Firefox" button (from the Firefox Add-ons site) from one running instance of Firefox to another running instance of Firefox and the add-on will be installed in that version of Firefox (if of course, it's compatible). Install a Firefox Theme Manually Method: Firefox 4 and higher. Open the Add-ons Manger > (Alt + t > a) click on the gear icon (Tools for all add-ons) > Install Add-on From File... > browse to the theme file > double click the file (or select Open) > Install Now Method: Open the Add-ons Manger > (Alt + t > a) click on Appearance > drag the theme file that you saved to the instance of Firefox on the taskbar > wait for Firefox to appear > drop onto the browser window > Install Now. Selecting a Theme Open the Add-ons Manger > (Alt + t > a) click Appearance > select a theme (single click on one), click Enable, restart Firefox. Your selected theme will be visible after Firefox is restarted. Install Add-on graphic by Ken Saunders Hand used in graphic by mossi889 of deviantART.com Add-ons let you add bells and whistles to Firefox. You can get add-ons that compare prices, check the weather, change the look of Firefox, listen to music, or even update your Facebook profile. This article covers the different types of add-ons available and how to find and install them. What types of add-ons can I install? These general types of add-ons can be installed: Viewing and managing your installed add-ons Search engines can be viewed and managed in the Search panel in Firefox Options/Preferences/Settings . For other add-ons: Click the menu button and choose . The Add-ons Manager tab will open. Select the panel for the type of add-on you wish to view or manage, such as the or panel. For detailed information on disabling or removing add-ons, see Disable or remove Add-ons. How do I find and install add-ons? Here is an overview to get you started: Firefox may offer personalized recommendations. Click the menu button , click and select . To install a recommended add-on, click the blue + Install Theme or + Add to Firefox button, depending on the type of add-on. At the bottom of the list of recommended add-ons, there's also a Find more add-ons button you can click. It will take you to addons.mozilla.org where you can search for specific add-ons. For advanced users: You can also install add-ons from a file. If you saved the installer file to your computer, (for example, an .xpi or .jar file) you can install the add-on using the gear icon in the upper-right area of the Add-on Manager panel. Select from the menu, then find and select the file. Some extensions place a button in the toolbar after installation. You can remove those or move them into the menu if you want - see Customize Firefox controls, buttons and toolbars. Troubleshooting add-ons For information on troubleshooting problems with extensions, plugins, or themes/extensions or themes, see the articles below. Problems with installing or uninstalling add-ons Problems caused by add-ons These fine people helped write this article: AliceWyman, Chris Ilias, Cheng Wang, Underpass, novica, Tonnes, Michael Verdi, scoobidiver, John99, Swarnava Sengupta, Ben, Centinel, ideato, Michal Stanke, Imen, Joni, Artist, andrewtruong, Ömer Timur, Caitlin Neiman, Ryan D Day, tech53, Angela Lazar, Fabi A theme is a type of Firefox add-on that changes the visual appearance of Firefox. This article describes how to find, install and manage themes... When you install an extension into Firefox, you may be presented with a message similar to this one: This is an extension asking your permission... By default, Firefox does not come with translation features. However, you can easily add such a feature by installing an add-on of your choice.... Extension Basics Getting started Mozilla Developer Network Documentation Topics Community Extension Basics Getting started Mozilla Developer Network Documentation Topics Community You may want to send a user your add-on's XPI file by some means other than a web download, such as an email distribution of a beta version for user testing. In this case, there are two practical options for installing the add-on: Using Install Add-on From File in the Add-ons Manager. Adding the file to one of the standard extension folders. No automatic updates will be performed for add-ons installed using these methods. You will have to deliver a new XPI file to your user for each update. However, automatic compatibility checks are still performed. Regardless of the sideloading method used, you must prepare the add-on as follows: Ensure the add-on includes an ID, by adding the following to its manifest.json file, replacing your-add-on-name@your-domain.com with a suitable ID for your add-on: "browser_specific_settings": { "gecko": { "id": "your-add-on-name@your-domain.com" } } An email address style ID is recommended. To use Install Add-on From File in Add-on Manager, send the user the signed add-on with the following instructions: Save the add-on file to a suitable location on your computer. In Firefox, open the Firefox menu Firefox browser menu button and click Add-ons. From the settings cog, open Install Add-on From File. Browse to and open the file from the location where it was saved. When prompted click Add: The add-on will now appear in the add-on manager's list of installed add-ons and be ready to use. Starting in Firefox 73, it will no longer be possible to have an extension be automatically installed as part of another application install. See the Add-ons Blog for more information. This method of add-on installation involves copying the add-on into one of the standard extension folders on the user's computer. Once copied, the next time Firefox launches the add-on will be installed. By default, the user will be asked to approve the installation, and if the user approves, the add-on will be installed and automatically loaded for subsequent launches. If the user has more than one Firefox profile, the approval and installation will occur on the next launch of each profile. For details on controlling whether the user is prompted to approve the installation, see Controlling automatic installation. Rename your XPI file To use this method, your XPI file must be named using the add-on or application ID, as set in Preparing your add-on. The signed add-on file you downloaded from AMO will be named something like borderify-1.0-an+fx.xpi (see Signing and distributing your add-on for more details), change this to, for example, borderify@example.com.xpi. If you are developing an add-on for Firefox you can use an extension proxy file to install an add-on without copying the files over to the standard extensions folders. Add the add-on XPI file to a standard extensions folder In what follows {ec8030f7-c20a-464f-9b0e-13a3a9e97384} is the application ID of Firefox. The standard installation of Firefox disables the automatic installation of add-ons from these locations (see Controlling automatic installation). As a result, the process for each of the methods described below is as follows: Copy the renamed XPI file to the extensions folder for Windows, macOS, or Linux as appropriate. Note that, depending on the desktop OS and its settings, the user may need administrator permission to complete this action. Close and restart Firefox. Depending on the OS and version of Firefox one of the the following will happen: The install will happen silently, and the user will need to open add-on manager and enable the add-on: An interstitial message will be displayed. The add-on is now installed. For more details on the interstitial and silent installs, see Controlling automatic installation. To uninstall the add-on, close Firefox and remove the add-on from the location where it was added. Windows To install the add-on for a user of the computer, copy the XPI file to: C:\Users\%AppData%\Roaming\Mozilla\Extensions\{ec8030f7-c20a-464f-9b0e-13a3a9e97384}\ If this folder does not exist, create it. You can also identify the current user's path with the %appdata% system variable. macOS To install an add-on for use by all Firefox profiles and all users, copy the XPI file to the global extension folder located in Library. If this folder doesn't exist, you will need to create it. /Library/Application Support/Mozilla/Extensions/{ec8030f7-c20a-464f-9b0e-13a3a9e97384}/ Linux To install an add-on for use by all users, copy the XPI file to: /usr/lib/mozilla/extensions/{ec8030f7-c20a-464f-9b0e-13a3a9e97384}/ Or... /usr/lib64/mozilla/extensions/{ec8030f7-c20a-464f-9b0e-13a3a9e97384}/ Or... /usr/share/mozilla/extensions/{ec8030f7-c20a-464f-9b0e-13a3a9e97384}/ To install an add-on for a specific user, copy the XPI file to: ~/.mozilla/extensions/{ec8030f7-c20a-464f-9b0e-13a3a9e97384}/ Develop Publish Manage Enterprise Themes For developers: @mozamo For end users: @rockyourfirefox Stay up-to-date on news and events for Firefox extension developers. If you haven't previously confirmed a subscription to a Mozilla-related newsletter you may have to do so. Please check your inbox or your spam filter for an email from us.
